Unit History		
<p>Informatics Department was established on February 4, 1998 and it has started to work in Faculty of Sciences and Literature building by assigned of Prof. Dr. Doğan ÇOKER as head of the department. Since 2003, Asst. Prof. Dr. Ali Sukru ONURAL had been as head of the department and Informatics Department moved to Technical Sciences Vocational High School building in this period. First permanent academic staff of the department has started his assignment in 2003. Between 2006-2008 years, Asst. Prof. Dr. Mehmet BİLGİN has served as head of the department. Since 2008, Asst. Prof. Dr. Mehmet TOPAKCI has assigned as head of the department.</p> <p>In the department, there is totally 8 academic staff as 1 head of department, 1 vice-chair, 7 instructor academic staff, 1 secretary, 1 technician and 1 servant.</p>		
Mission	Vision	
<ul style="list-style-type: none"> ▪ Providing educated students who follow technology and accordance with the terms of the age. ▪ Giving computer lessons, which are accordance with the terms of the information age, to university students. ▪ Giving courses to public institutions, organizations and private sector about information technology. ▪ Caring maintenances of existing computer labs for software and hardware. ▪ Being assigned academic staffs as instructor by planned on the basis of groups for computer courses. 	<p>Informatics thematizes production of information systems. It aims to product complete and useful information systems by determined firstly what is information systems which will be produced, how designed and after by what implemented it. Informatics is an interdisciplinary field which combines theory and practices of many disciplines. Informatics is an discipline which is combined computer, communication and management. As a profession job, informatics aims to gain ability of usage and implementation of information and information systems.</p>	
Department Mission		
<p>Informatics purpose to extend of the information technologies of all disciplines within the university and university organizations level. Also the department aims to make organizations and arrangements to teach information technologies subjects to university students and to coordinate and/or actually make courses.</p>		
General Information about The Education System		
<p>Informatics Department is an academic unit which gives Information Technologies courses as required courses</p>		

and elective 6 computer courses (Computer Programming, Internet Programming, Database Applications, Computer Aided Drawing and Design, Advanced Office Applications, Multimedia Applications) depending need of the departments. These courses are given Fall or Spring Semester according to planning on the basis of departments for university first cycle students.

Program Objectives

Informatics program aims to educate individuals who have knowledge about information acquisition, generation, transmission and information usage; use basic information and communication technology possibilities which will be necessary on lifelong learning processes; make self-actualization by benefit these technologies; solve problems and provide needs of information and communication on subjects of their fields.

Physical and Technical Infrastructure

Informatics Department has totally 11 computer laboratories which 4 of them are located belonging to the department building, one of them is located in the central classrooms building and 6 of them are in different units. Laboratory student capacity is 40-student and the laboratories have providing a computer for each student.

Program Competencies

1. A basic, theoretical and practical knowledge about basic information technologies.
2. Information about design and development of hardware and software solutions.
3. Constructing and implementing identified problems and models at using use of information technology and applying of basic solution suggestions.
4. Developing software specifications defined which components.
5. Following current developments of information and communication technologies by awareness of lifelong learning necessity.
6. Communicating by published and visual materials developed information and communication technologies.
7. Having algorithmic though and using planning approach on their applications.
8. Carrying professional and ethical responsibility having professional ethics awareness about IT applications. Taking necessary cautions about information security.
